METAPLACE

PERFECTED BY TIME
HANDCRAFTED BY METAPLACE INDUSTRIES.

The **Metaplace** captures the ephemerality of a tree struck by lightning, burning from within, and is designed to be a statement piece of a home or institution.

'Ascendance', our inaugural creation, is an Early Miocene era petrified tree - estimated to be 22 million years old - and is the world's first petrified wood fireplace.

A jungle hardwood from the Diptocarpaceae family - of which family members still live today - she stood during the era of saber tooth tigers and some of today's early mammals. At nearly 3,000 lbs, the piece carved to form Ascendance was carefully exported from Indonesia before being hand polished and carved into this exquisite fireplace.

Ascendance will captivate the imagination and warm the heart. Equipped with a natural gas burner controlled by a Bluetooth compatible remote, 'Ascendance' was built with a custom-concrete pedestal specifically designed for the installation.

As a way of giving back to the people of Indonesia—the primary source of the petrified wood used to create a Metaplace—2% of our net profits will be donated to Direct Relief International, a nonprofit that helps Indonesian children in areas of extreme poverty.

"Metaplace draws its inspiration from the world's wonder and beauty. Millions of years in the making, petrified wood is a material that is as mysterious as it is alluring."

-NICK WRAY, Founder of Metaplace Industries
